TCP/IP is the leading communications software for local area networks and enterprise intranets, and it is the foundation of the worldwide Internet. TCP/IP is the most important networking software available to a Unix network administrator. The first part of this book discusses the basics of TCP/IP and how it moves data across a network.

tion needed to become an effective TCP/IP network administrator. TCP/IP Network Administration was the first book of practical information for the professional TCP/IP network administrator, and it is still the best. Since the first edition was published there has been an explosion of books about TCP/IP and the Internet. Still, too few books concentrate on what a system administrator really needs to know about TCP/IP administration.
